

SES ENGINEERING SERVICES APPOINTS NEW REGIONAL PRE-CONSTRUCTION MANAGER

Leading national engineering specialist, [SES Engineering Services \(SES\)](#), has expanded its pre-construction team on the back of an increased workload, by welcoming the arrival of experienced pre-construction manager, Nathan Hall.

Based at SES' Royal Quays office in North Tyneside, Nathan will be the link between our customers and SES during the pre-construction period. He will have responsibility for working jointly with the wider business functions including estimating, design, the operations and delivery team and SES' offsite manufacturing facility, Prism to ensure that SES brings together the strongest possible team to deliver bids.

Bringing 20 years of expertise to the role, Nathan began his career as a mechanical engineering technician, gaining broader experience with subsequent roles over the years as a design manager, bid manager and estimating manager before becoming pre-construction manager.

Speaking about his decision to join SES, he said:

“SES is a leading MEP specialist with a wide client base, working across multiple sectors. The company is well resourced, has a great reputation and is ambitious for success, being recognised for its strong work winning and delivery team within the industry.

“As pre-construction manager for the North East and Yorkshire, I know the SES team well from my previous employment and know that I am joining the company at an exciting stage in its growth following an increase in its workload. I am very much looking forward to supporting the future success of SES with my wide-ranging experience and enthusiasm for the role.”

Impressed by Nathan's well-rounded experience in health, education, defence, manufacturing and energy, SES' managing director, Steve Joyce, added:

"Nathan is highly talented and has proven experience across many of the sectors in which SES is also active. He will be an asset to our pre-construction function, and we are delighted to welcome him to the SES team."

ENDS

NOTES TO EDITORS

About SES Engineering Services

SES Engineering Services (SES) provides market-leading technical solutions for the built environment through the design, manufacture and installation of building services. With more than 50 years' experience SES provides complex technical solutions for clients across a range of sectors. Through its offsite manufacturing facility, Prism, SES provides an innovative alternative to labour-intensive, time consuming on-site production and assembly.

The combination of SES' innovative approach, use of the latest technology to deliver great buildings, its commitment to reducing its impact on the environment and its exemplary HSE record bring benefits not only to SES and its clients but also to the wider industry.
